

vanity units

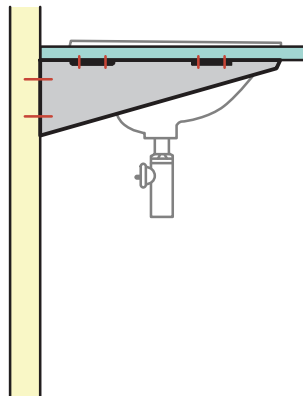

overview

Stylish vanity units are available manufactured in 13mm solid grade laminate (SGL) to match or contrast the **splash** cubicles.

As SGL is impervious to water, this is the perfect material choice for vanity units allowing both top and under-mounted wash hand basins to be used without concern over material decay.

support brackets

Vanity tops can be supported on either powder coated aluminium/stainless steel cantilever brackets.

colours

Vanity tops are readily available in a choice of 6 standard colours, with additional colourways available subject to extended delivery and surcharge. See page 12 for details.
